P R E F A C E.

EVERY one conversant in Botany and Gardening, must be sensible how difficult it is for any one person, let him be ever so assiduous, to gain perfect information of all the Varieties of Plants cultivated in the Gardens and Nurseries of England.

As soon therefore as the English Flora was printed, the Author distributed *gratis* near a hundred books, to such persons as he thought might each of them contribute a little, by informing him of Varieties in their possession, which he had omitted. But in this he has been greatly disappointed; scarcely any one having given the least assistance; which occasioned him to postpone, from month to month, the publication of the APPENDIX as promised, or even advertising the FLORA.

In the mean time, he took every opportunity of gaining fresh information; and, agreeably to

P R E F A C E.

his promise, now offers to the Public what additions he hath been able to make to the FLORA, in order to complete the Work down to the present time, hoping that these will meet with approbation; yet he requests the favor of further information of any Plants omitted, or of new ones since introduced into the gardens; which shall be printed when a sufficient number is collected for publication.

Should any doubts arise with regard to the existence of the Plants inserted, it is necessary to mention, that the Author of the FLORA rests upon the authority of the Catalogues of the most eminent Nurserymen near London, to whom he refers his Readers.

In this SUPPLEMENT are likewise given Alterations and Emendations made in the two Mantissas by Linnæus, and in the Systema Vegetabilium (published by Mr. J. A. Murray, at Gottenburgh, in 1774); many Plants having in these Works been transferred to different Genera, Classes, and Orders, in consequence of more accurate observations.

Mr. Blackburne's noble collection of Plants at Orford, Lancashire, containing about three thou-

P R E F A C E

land, which do great honour to that Gentleman for the trouble and expence he must have been at in collecting them, having many curious Plants in it, not yet cultivated in the Nurseries and Gardens near London (at least not inserted in their Catalogues) these have been selected, and contain as follows :

Hardy Trees and Shrubs . . .	24
Perennial Herbaceous Plants . .	235
Annual and Biennial Plants . .	45
Greenhouse Plants	57
Stove Plants	135
Total	496

These have been arranged together, to inform the Public where the Plants really exist, and can be seen ; Mr. Neale (Mr. Blackburne's Gardener) asserting, “ That no Plants have been “ inserted but such as could actually be shewn “ in the garden at the time of printing.”

The Collection of Gooseberries, raised from seed in Lancashire, containing three hundred and twenty varieties, with their names, colours, and prices, shews to what perfection industry, spirit, and perseverance will arrive, in the improvement

P R E F A C E.

of fruits; and is well worth imitating in the cultivation of several other fruits, and of many plants, as articles of commerce.

An INDEX, arranged in Columns, which shews in one point of view, the Number of Species, and Varieties of each Genus, and to which Class of Cultivation they belong, is inserted. This, it is presumed, will be found both useful and entertaining, as it will enable us to form a comparison between the number of Plants cultivated in England and those in other parts of Europe, the English Plants now amounting to about *Four Thousand*, including two hundred and forty-three Varieties of Kitchen-Garden Plants.

INDEX of the GENERA

DESCRIBED IN THE

FLORA and SUPPLEMENT,

With the Number of Species and Varieties of each Genus,
And to which Class they belong.

*The Asterisks * before any Figure, as Aletris, Aloe, &c. denote that some of the Species are arranged in two Classes, as being either a tender Herbaceous, or an hardy Greenhouse Plant, &c. and therefore cannot be reckoned twice in the total Number of the Species.*
